ISO 19443 Quality Management Standard for the Nuclear Supply Chain

Future-proof your offering by showcasing the quality and reliability of your processes and gaining a competitive advantage

What is ISO 19443?

ISO 19443, a nuclear-specific quality management standard to improve safety and quality throughout the nuclear supply chain, builds upon the principles stated in ISO 9001. It adresses all organisations within the nuclear supply chain that supply products or services important to nuclear safety (ITNS). ISO 19443 aims to harmonize requirements within the sector and help international supply chain to overcome market entry barriers.

Why is ISO 19443 important for you?

Since the nuclear sector is becoming increasingly international, in some projects it is already mandatory to become certified according to ISO 19443 as a proof of global quality standard and safety compliance, and eliminating concerns regarding counterfeit, fraudulent, suspect items within the supply chain. Implementing ISO 19443 gives you access to the international market, facilitates global acceptance, and reduces risks for your company.

Our services tailored to your needs:

- **ISO 19443 Training - Overview of crucial requirements**
  Learn from our experts how to adapt your quality management system to meet the specific requirements for nuclear industry.

- **ISO 19443 Pre-Audit - Find out if your management system is ready**
  Get a first check of your quality management system through Gap-Analysis conducted by our team of experts and auditors.

- **ISO 19443 Audit and Certification - Become a certified nuclear supplier**
  Get an audit of your quality management system to check if it meets the requirements. Profit from our pool of international auditors that can support you wherever you are. Since ISO 19443 builds upon ISO 9001, it is expected that double auditing will become obsolete. As a result, being certified according to ISO 19443 includes the possibility of obtaining the ISO 9001 certificate. An audit covering both standards will reduce your costs.
