What is ISO 19443?

ISO 19443, a nuclear-specific quality management standard to improve safety and quality throughout the nuclear supply chain, builds upon the principles stated in ISO 9001. It addresses all organisations within the nuclear supply chain that supply products or services important to nuclear safety (ITNS). ISO 19443 aims to harmonise the requirements within the sector and help international supply chain overcome its challenges.

Why is ISO 19443 important for you?

Since the nuclear sector is becoming increasingly international, for some projects it is already mandatory for companies to become certified according to ISO 19443 as a proof of global quality standard and safety compliance, thus eliminating concerns regarding counterfeit, fraudulent, suspect items (CFSi) within the supply chain. Implementing ISO 19443 gives you access to the international market, facilitates global acceptance, and reduces risks and uncertainty for your company.

Our services tailored to your needs:

- **ISO 19443 Pre-Audit - Find out if your management system is ready**
  Get a first check of your quality management system through Gap-Analysis provided by our team of experts and auditors.

- **ISO 19443 Audit and Certification - Become a certified nuclear supplier**
  Get an audit of your quality management system to check if it meets the requirements. Profit from our global team of experts and auditors that can support you wherever you are. Since ISO 19443 builds upon ISO 9001, it is expected that double auditing will become obsolete. As a result, being certified according to ISO 19443 will include a possibility to obtain an ISO 9001 certificate. An audit covering two certificates will make you more efficient.

- **ISO 19443 Training - Overview of crucial requirement areas**
  Learn from our experts how to adapt your quality management system to meet the specific requirements for nuclear industry.
