Product Safety & Conformity Representative Training Program

Qualifying people. Developing future.

About the course

TÜV SÜD's VDA Approved Product Safety & Conformity Representative (PSCR) Training is aimed at providing knowledge through our experts that will enable professionals to carry out their work professionally in order to achieve the target. As a part of the training program, professionals are trained to conduct a proper check right from the research and development stage, through production, quality check and the final product.

Duration of the training: 2 Days

Language: English

Who should attend?

Automotive executives and personnel who are to be deployed as product safety representatives or who already hold that position. All product safety professionals who are responsible for ensuring product safety and conformity at every stage from development to final product, throughout the product life-cycle can take up the VDA Product Safety & Conformity Representative(PSCR) Training for better hold over the processes that go into the making of the product.

Pre-requisites

- Technical/business management training
- Experience in quality management in the automotive sector, especially in complaints and resource management
- Qualified and experienced in the evaluation of technical product and process risks (for example, FMEA facilitator, VDA 6.3 process auditor, designer / developer)
- Knowledge of the application of the products made in the delegate's company, as well as the latest state of technology
- Basic knowledge and understanding of requirements arising from relevant legislation and customers' requirements

Course Outline / Overview

- Better technical knowledge of the product
- Expertise to avoid nonconformities in the product cycle
- Enhanced ability to take recourse action in case of product nonconformity
- Improved ability to take decisions in case of product complaints
- Professional development and resource development
- Opportunity to be a part of the industry association of quality managers

Benefits of enrolling for this course

- basic knowledge and requirements to achieve product integrity during the various stages of the product life-cycle
- improves the personal performance of the employee
- helps automotive industries gain confidence and improved business opportunities in the automotive supply chain
- effective implementation of standards and improving competitive performance

Certification

Upon successful completion of the training and examination qualification, you will receive a VDA certificate of competency.
