

GFMW 2022 Abstract Submission Guidelines

Format of Delivery

We appreciate that time and company approval are issues for many of you, so there are two options in which you can deliver material for the Workshop.

1. **A full written technical paper or an extended abstract** for presentation during the technical session of the Workshop which will be published in the proceedings. Your presentation timeslot will be 20 minutes with a 5-10 minute chaired question and answer session. The Presenting Authors of accepted abstracts will be expected to attend the Workshop and deliver their presentation in English.
2. **A slot within the Workshop Poster Session** which involves the Presenting Author discussing the abstract during the poster session. You have the option to submit **a full written technical paper or 2-page executive summary** to supplement your poster which will be published in the proceedings. This option is suitable for more theoretical and/or academic papers.

Due to the high number of submissions expected, some contributors may be invited to present their work in a different format from that initially submitted.

Call For & Submission of Abstracts

Abstracts are now invited from operators, service and supply companies, manufacturers, consultants, regulators, researchers, standard bodies and academia.

Your abstract should be 200-600 maximum words in length with optional supporting material of tables and figures.

Email your abstract submission(s) using the template overleaf to events.uk@tuvsud.com

Deadline Details

Abstract Submission:	18 March 2022
Notification of Acceptance:	27 May 2022
Receipt of Extended Abstract/Paper & Speaker Bio:	9 September 2022
Submission of PowerPoint:	3 October 2022

Failure to meet these deadlines will result in the Workshop Committee withdrawing your paper/poster from the Workshop programme.

GFMW 2022 Abstract Submission Guidelines

Topics of Interest

The theme for 2022 is technical innovation in flow measurement on the road to Net Zero. The Workshop will explore challenges for the entire energy sector as stakeholders throughout the supply chain position themselves to address the energy transition.

The conference is accepting papers from upstream, midstream and downstream organisations involved in the energy transition, from oil and gas, to hydrogen and CCUS. The Technical Committee is interested in receiving papers representing all aspects of flow measurement, uncertainty and quality improvement, but the following topics are particularly relevant:

- New energy – flow measurement, transportation, standards, and challenges in cleaner fuels
- The role of measurement and traceability in ensuring a Just Transition
- LNG development, transportation, and challenges, from marine to energy consumption
- Digital flow solutions – including measurement, health check, or data validation
- Techniques or devices improving the quality of measurement and/or uncertainty
- Innovation in measurement of water in oil (watercut meters)
- Latest solutions and improvements in developing frontier and deep-water areas
- Gas and leak emissions (flaring, CO₂, CH₄, venting, N₂O...)

To maintain the practical aspect of the event, case-study style papers and those led by end-users will be given priority.
