

# MARKET ACCESS FOR THE EURASIAN ECONOMIC UNION

## EAC Certification

New opportunities, new challenges

As the fastest growing export market and the third largest after Europe and North America, Russia is a country with many opportunities for foreign companies.

The creation of the Eurasian Economic Union of Russia, Belarus, Armenia and Kazakhstan has helped to ensure production quality within the trading zone, simplify product distribution by eliminating taxes and complex procedures, and open up new business opportunities for manufacturers.

However, to gain access to the Eurasian Economic Union, you need to achieve the necessary certification or declaration documents and ensure that your machinery and industrial equipment meet the stringent safety regulations and standards of the Eurasian Economic Union.

Your market access: TR CU Certificate

For many products that are to be exported to Russia and other countries in the Eurasian Economic Union (Belarus, Kazakhstan, Armenia and Kyrgyzstan), their conformity with the requirements of technical regulations and standards has to be attested before the launch. The attestation of conformity takes place in the form of a EAC certification or EAC declaration.

At present, there are 43 technical regulations of the EAEU. Among them are the following regulations for technical equipment:

<b>TR CU 004/2011</b>	On the safety of low-voltage equipment*
<b>TR CU 010/2011</b>	On the safety of machinery and equipment*
<b>TR CU 011/2011</b>	On the safety of lifts*
<b>TR CU 012/2011</b>	On the safety of equipment used in explosive environments*
<b>TR CU 016/2011</b>	On the safety of fuel gas machinery*
<b>TR CU 020/2011</b>	Electromagnetic compatibility of hardware*
<b>TR CU 032/2013</b>	On the safety of pressure equipment**

\* in force since February 15, 2013 \*\* in force since February 1, 2014

## How we can help you

TÜV SÜD is familiar with all requirements for the Russian & EEU market. We provide comprehensive, qualified support and actual information regarding certification of your products in accordance with regulations and standards of the Eurasian Economic Union. Our experts partner you throughout every phase, providing a solution tailored exactly to your needs.
